**INSTRUCTIONS FOR USE**

If printing from downloaded PDF make sure the page scaling option is set to 'none' in your print settings.

Print your photograph on photo paper to a size that best fits within the simple outlines - using the samples as cropping guides.

Cut out the relevant size of template within the outline. Place on top of your photograph and draw an outline around it. Use this drawn outline as a cutting guide.

Your photo should now fit within the inside rim of the locket. Each locket can take two photos.
